

ReRack

Flexible, Synthetic Rubber Coating

Consumers have been asking Plasti Dip International for a dishwasher rack repair for years and now it's available in a 1-oz brush on bottle. The flexible, synthetic rubber coating exhibits excellent adhesion to dishwasher and other vinyl coated racks. Ideal for touching up rusted and damaged dishwasher racks, eliminating the transfer of rust onto dishes. This high-strength formula is heat and water resistant, will not peel or pop off during high water pressure washes, will bond to most pre-coated vinyl wire racks including: shower caddies, wire closet / shoe organizers, and draining racks, etc... ReRack will last and provide protection for years.

Application instructions:

Remove loose rust from repair area. Clean repair area with rubbing alcohol and let dry. Shake bottle well before using. Apply ReRack to repair area, overlapping the existing finish. For best results apply multiple coats. ReRack dries to touch in 30 minutes, however, allow overnight drying before use. For clean up use acetone.

Features:

- Wont' crack, chip, or become brittle
- Resists heat, high water pressure
- Protects against rust
- Easy to use
